Instructions

----

1. This Project doesn't have installer. To run the Project

2. Create a database by the name **online exam db.**

3. Dump the **online exam db.sql** in your sql Administration tool.(eg **phpmyadmin**)

4. Start the all services in your server :-Webserver,Database server

5. Allow the **register globals** in your Webserver >PHP>PHP Setting>register globals

5. Allow the **allow url include** in your Webserver >PHP>PHP Setting>allow url include

6. Admin Account:

     Admin username: **root**

     password: **root**

7.Copy the Project in the **C:\wamp\www\   folder**

8. Path to access Home Page is **http://localhost/Online Exam Ex_2**

9.Your browser should enable JavaScript

 To Enable JavaScript - Internet Explorer

You can check to see if JavaScript is enabled by navigating to the custom security settings that are somewhat buried (don't worry; we'll help you find it).

1. Click on the **Tools** menu
2. Choose **Internet Options...** from the menu
3. Click the **Security** tab on the **Internet Options** pop up

4. Click the **Custom Level...** button to access your security settings
5. Scroll almost all the way down to the **Scripting** section
6. Select the Enable button for **Active scripting**
7. Click **OK** to finish the process
8. Click **Yes** when asked to confirm

Enable JavaScript - Firefox

You can check to see if JavaScript is enabled by navigating to the **Content** settings under **Options**.

1. Click on the **Tools** menu
2. Choose **Options...** from the menu
3. Click the **Content** tab in the **Options** pop up
4. Make sure that **Enable JavaScript** is checked
5. Click **OK** to finish the process

THE PROJECT IS READY TO RUN
